TRISHNA JAISWAR

AI Engineer

Mumbai, Maharashtra | trishnajaiswar35@gmail.com | +91 93215 57825 | linkedin.com/in/trishna-jaiswar-a6a230322 | github.com/TrishnaJaiswar

PROFESSIONAL SUMMARY

Recent B.E. graduate with hands – on experience in Machine learning, Deep learning, Generative AI, and Agentic AI, as well as full – stack development. Proficient in Python, TensorFlow, PyTorch, Scikit – learn, NLP, LangChain, LangGraph, RAG, and LLM – powered applications, currently focusing on developing multi – step, multi – agent workflows with tool integration, and evaluation. Solid foundation in full – stack development skills – JavaScript, React, Node.js, Express, MongoDB, and Streamlit, enabling work across the full development life cycle. Eager to apply these skills to real – world problems and contribute to production – grade AI systems. Strong analytical skills demonstrated through exploratory data analysis, model evaluation, and API integration across multiple GenAI providers.

PROJECTS

ResolveAI — Enterprise Agentic Support Copilot | GitHub | Live Demo

Tech: Python, FastAPI, LangGraph, LangChain, Groq, Hugging Face Sentence Transformers, Pinecone, PyPDFLoader, RecursiveCharacterTextSplitter, Tavily, SQLite

- Built an enterprise agentic support copilot using LangGraph that routes each employee request through an intent router to knowledge retrieval, ticket creation, or a direct answer path, maintaining persistent agent state across the workflow
- Implemented an enterprise RAG pipeline with Pinecone vector retrieval and Hugging Face Sentence Transformer embeddings, adding an evidence grader that verifies retrieved context is sufficient before generation to avoid unsupported answers
- Designed a web-intelligence fallback using Tavily search with automatic query rewriting and re-grading when internal enterprise knowledge is insufficient to answer a question, with retry limits to prevent uncontrolled search loops
- Built a human-in-the-loop ticket automation workflow that extracts structured tickets (category, issue, priority, description) and pauses for explicit employee confirmation before creation, with multi-tenant Pinecone namespace isolation per company

NeuroScholar-AI — *Agentic Multi – Document Research Intelligence Platform* | GitHub | Live Demo

Tech: *React, Tailwind CSS, Zustand, FastAPI, LangGraph, LangChain, Groq, FAISS, BM25, Hugging Face Embeddings, SQLite, Docker*

- Built a full – stack agentic research platform that allows users to query, compare and analyze multiple scientific papers using a 6 – agent LangGraph workflow – planner, retrieval, research, analysis, citation, and report agents
- Implemented hybrid retrieval with FAISS semantic search, BM25 keyword search, and multi – query expansion with citation verification – all answers grounded in the source documents.
- Designed a React, Zustand, and FastAPI full – stack architecture that supports four workflows – research chat, literature review generation, side – by – side paper comparison, and cross – paper trend analysis with persistent chat history in SQLite
- Built an automated academic report generator that uses ReportLab to produce publication – style PDF reports of abstract, findings, comparative analysis, and references.

ForgeBlog-AI — *Autonomous Multi – Agent Blog Generation Platform* | GitHub | Live Demo

Tech: *Python, LangGraph, OpenRouter, Tavily, Hugging Face FLUX.1-dev, Streamlit, Docker*

- Built an autonomous multi – agent platform that researches, writes, and illustrates technical blog posts end – to – end from a single topic input with LangGraph
- Designed a six – stage agent pipeline – router, research, orchestrator, parallel writers, image planner, and image generator – the router agent classifies each topic to determine if web research with Tavily is needed.
- Implemented parallel writer agents to allow simultaneous writing of multiple blog sections that merge together into a single piece with orchestrator agent handling outline, tone, and section planning
- Integrated Hugging Face FLUX.1-dev to auto – generate technical diagrams at agent – identified insertion points, exporting a complete Markdown blog with embedded images with a Streamlit interface.

TECHNICAL SKILLS

GenAI/LLM: LangChain, LangGraph, RAG Pipelines, MCP (Model Context Protocol), Groq LLM, OpenRouter, Tavily, Hugging Face Embeddings, Vector Databases (FAISS, ChromaDB)
ML/DL: Scikit-learn, TensorFlow, PyTorch, NLP, Model Evaluation (Accuracy, Precision, Recall, F1)
Backend & Web: FastAPI, Streamlit, Node.js, Express.js, React.js, HTML/CSS
Languages & Databases: Python, JavaScript, SQL, MongoDB, MySQL, SQLite
Tools: Git, GitHub, VS Code, Jupyter Notebook, Docker, Render, Cloudflare Workers
API Integration: Groq API, OpenRouter API, Tavily API, Hugging Face API, GitHub API, YouTube Transcript API
Currently Learning: *CI/CD (GitHub Actions), Kubernetes, GCP — extending deployment pipelines beyond current Docker/Render/Cloudflare setup*

EDUCATION

B.E. in Artificial Intelligence and Data Science — New Horizon Institute of Technology and Management (Mumbai University) · *May 2026*
XII (HSC) — P. A. Menon College of Commerce & Science · *2022, 60%*

CERTIFICATIONS

- Full Stack Web Development (MERN) — built and deployed multiple full – stack web applications.
- Machine Learning A – Z (Udemy) — Machine Learning, Deep Learning, NLP, Reinforcement Learning, model optimization.

Languages: English (Fluent), Hindi (Fluent)
